CSC220-01: Computational Problem Solving

Professor: Staff

Prerequisites: None

Available Seats: 2

Description: This is an introductory course to computer science. You will learn Java in this class.

FAQs

Why are certain rows blue, red, yellow, or green under Course List?

The colors represent your status regarding the enrollment of the classes. A blue row means you have already enrolled in that course. A green row means you have have satisfied the requirements for that course and are eligible to enroll. A yellow row means you have not met the requirements for that course and cannot enroll. A red row means there are no more available seats for that course section. (You may put yourself on a waitlist if you want to enroll in a course that you cannot enroll.)

Why are certain rows red, yellow, or green under Course History?

The colors are reflected off your final grade for the course. A green row means you received a grade of C or better. A yellow row means you have received a grade of -C-, D+, or D. (Note that while you may receive credit for passing the class, you might not be eligible to enroll in a course that use this course as a requirement as they often require a minimum letter grade of C or better. For more information, contact your department.) A red row means you received an F for that course.
